Bhopal, Madhya Pradesh | +91 7049104727 | krishnasen0006@gmail.com | linkedin.com/in/krishna-sen | github.com/Krishna02213

Professional Summary

Data science-focused CS engineering student with end-to-end experience across the ML lifecycle: querying and validating large datasets with **SQL**, cleaning and exploring data with **Python** (NumPy/Pandas), and building, evaluating, and deploying machine learning and LLM-based systems. Benchmarked multiple ML algorithms against accuracy metrics to select production-ready models, improving predictive accuracy by 22% through feature engineering. Built retrieval-augmented (RAG) and NLP pipelines using vector search and LLM APIs. Strong problem-solving foundation with 100+ DSA problems solved, and experience translating ML/statistical findings for cross-functional, non-technical stakeholders.

Education

Vellore Institute of Technology

B.Tech Computer Science and Engineering

- CGPA: 7.69

Bhopal, Madhya Pradesh

2023 – 2027

Skills

Programming & Data Analysis: Python, SQL, MySQL, SQLite, NumPy, Pandas, Data Cleaning & Exploration, Data Visualization, Excel/Google Sheets

Machine Learning & Statistics: Supervised/Unsupervised Learning, Regression, Classification, KNN, Decision Trees, Model Evaluation & Experimentation, Statistical Modeling

NLP & LLM Systems: NLP / Text Classification, RAG + Vector Search (FAISS), LLM Integration & Prompt Engineering (Groq, Llama 3.1, Gemini), LangChain, LangGraph

Problem Solving & Engineering: 100+ DSA Problems Solved (LeetCode), Root-Cause Analysis, Requirements Gathering, Python, Java, JavaScript, Flask, FastAPI, REST API Design, SQLAlchemy, Redis, DynamoDB, AWS (EC2), Docker, Git/GitHub, CI/CD, Pytest

Experience

AI/ML Internship – MPOnline Ltd. (Govt. of Madhya Pradesh & TCS)

May 2026 – July 2026

Remote

- Completed a 12-week engineering program building Python applications with NumPy/Pandas for data processing, applying structured problem decomposition and complexity analysis to scope and prioritize solutions.

- [View Internship Certificate](#)

Python Developer Intern – Java R&D Pvt. Ltd.

June 2025

Bhopal, Madhya Pradesh

- Gathered and translated stakeholder requirements into distinct Admin, Student, and Public feature flows for a Learning Management System's live-class module, as Secondary Backend Developer.
- Resolved the integration constraint of secure real-time class scheduling by building the Zoom API integration with OAuth authentication, coordinating third-party auth approval through the Zoom Marketplace review process.
- Defined role-based access rules across three user types, validated behavior with automated Pytest suites to catch regressions pre-release, and documented changes for team handoff via Git in an agile workflow.

Projects

Real Estate Price Prediction | Python, Flask, Streamlit, NumPy, Pandas

[GitHub](#) | [Live Demo](#)

- Framed model selection as a data-driven decision: benchmarked Random Forest, Linear Regression, and Gradient Boosting against accuracy metrics to choose the best-performing approach before deployment.
- Ran data cleaning and feature engineering with NumPy and Pandas, improving model accuracy by 22% – a measurable, evidence-based outcome.

Ask Your Database | Python, FastAPI, SQLite, SQLGlot, AWS EC2

[GitHub](#) | [Live Demo](#)

- Identified the core user pain point of non-technical users being unable to query their own databases, and validated a natural-language-to-SQL product hypothesis before building a schema-aware FastAPI backend to solve it.
- Addressed the safety constraint that free-form NL-to-SQL generation could produce unsafe queries by designing a SQLGlot guardrail layer enforcing read-only execution (blocking CTE smuggling), with automated self-correction on failures.
- Owned the product end-to-end – deployed and monitored the live service on AWS EC2, iterating on configuration based on real usage.

AI Career Copilot | Python, Flask, MySQL, Docker, Render

[GitHub](#) | [Live Demo](#)

- Identified the job-search friction of manually parsing resumes to track skills and experience, and scoped a document-processing pipeline within a full-stack Flask product to solve it end-to-end.
- Owned the product through to production – containerized with Docker and shipped on Render with environment-based configuration for reliability.

Certifications

- Oracle – OCI 2025 Certified Generative AI Professional Certificate
- NPTEL – Introduction to Machine Learning Certificate
- Google – Google IT Support Certificate
- Google – AI Certificate
